

# Empowering Educators to Unlock 21st Century Skills

## Enterprise Advisor – Winnie Tam

The philosophy of CLAP@JC is to bring the business world into schools, shaping the talent needed in the future business sector starting from the learning stage of young people. In this process, teachers who stand at the forefront of education play a crucial role as their influence on students is far-reaching. Regular professional development will allow teachers to better advise students on career planning. This broader perspective will improve their guidance and support. CLAP@JC organized an online seminar titled "21st Century Future Skills," inviting business professionals to share insights aimed at empowering educators and driving change.

EA Winnie Tam, an expert in human resource market trends, hosted this seminar, focusing on the development trends of future hot industries in Hong Kong. It aimed to help teachers understand market demands and opportunities. The presentation covered key transferable skills required in future workplaces, including:

### Communication Skills

Helping students effectively convey and understand messages, promoting teamwork.

### Problem-Solving Ability

Encouraging students to identify problems and use innovative thinking to find solutions.

### Using AI Tools to Enhance Analytical Skills

Learning how to collect and analyze data to make informed decisions.

### Basic Applications of Artificial Intelligence Tools

To improve work efficiency.

These skills will better equip teachers to prepare students for the challenges of future work.

The seminar showed to teachers how to write resumes that meet current workplace needs and primary interview techniques to enhance students' job-seeking success rates. Through these suggestions, CLAP@JC provided teachers with up-to-date job-seeking strategy knowledge, enabling them to guide students more effectively into a competitive job market.

This online seminar not only enhanced teachers' capabilities but also laid a foundation for students' career planning. By bridging the gap between education and the business sector, CLAP@JC plays an invaluable role in shaping the future talent pool in Hong Kong.
